Address \_\_\_\_\_

Draw your floor plan here

36 x 36 GRID · EACH SQUARE = 12 INCHES · MEASURE IN INCHES

Sample kitchen layout — yours may differ. Note walls, windows, doors (and the way they swing), plus water, gas & electrical lines.

## Six steps to an accurate drawing

**1 Draw your walls.** Sketch the kitchen on the grid in your current layout. Mark every door, hallway, window and obstruction.

**2 Mark utilities & door swings.** Note plumbing, gas and electrical. If moving any, show where. Indicate which way each door swings.

**3 Measure wall lengths.** Corner to corner for each full wall — always in inches — and write it on your drawing.

**4 Measure openings.** Measure each window and door opening edge to edge and note it down.

**5 Locate items on walls.** Measure corner to each item. These should add up to the full wall length — a quick accuracy check.

**6 Measure ceiling height.** Floor to ceiling at the corner where walls and ceiling meet.
